

ACCENDOWAVE

UV-C STERILIZATION PPE AND DEVICES SOLUTION

AccendoWave UV-C Sterilization Solutions and Corporate America Want to Help Hospitals with an Urgent Infection Control Initiative

Over the last 12 years, AccendoWave has perfected in-hospital UV-C sterilization of technology devices. To help combat COVID-19, we are working with corporations to fund sterilization lockers for hospitals and health care facilities.

With COVID-19, our hospitals are straining to provide patient care while dealing with significant equipment and supply chain shortages. We have all heard about the need for more PPE, ICU beds and ventilators - but another area of urgent need for our hospitals is sanitizing masks for reuse and sanitizing mobile technology.

Hospitals need our urgent help to acquire AccendoWave UV-C technology to sanitize masks for reuse and sanitize mobile technology to reduce infection spread to frontline staff and limit virus transmission to their families and ours. Current research show that the virus stays on many surfaces for several days or longer: <https://www.nih.gov/news-events/news-releases/new-coronavirus-stable-hours-surfaces>

Hospitals can moment by moment decide if they want to use each compartment to sanitize masks for reuse or UV sanitize mobile technology (internal cell phones, physician cell phones, nurse/staff cell phones, patient cell phones). If the masks are hung in the compartment - they are sanitized in 10 minutes. One hospital grade UV sanitizing locker is \$6,000 and can sanitize 72 masks or cell phones in an hour.

Hospitals are stretched right now with patient care. If your corporation/foundation can donate three carts to a hospital in your market and cover the first year of UV fees, or if your facility can receive donations, please visit: <https://www.accendowave.com/about>
